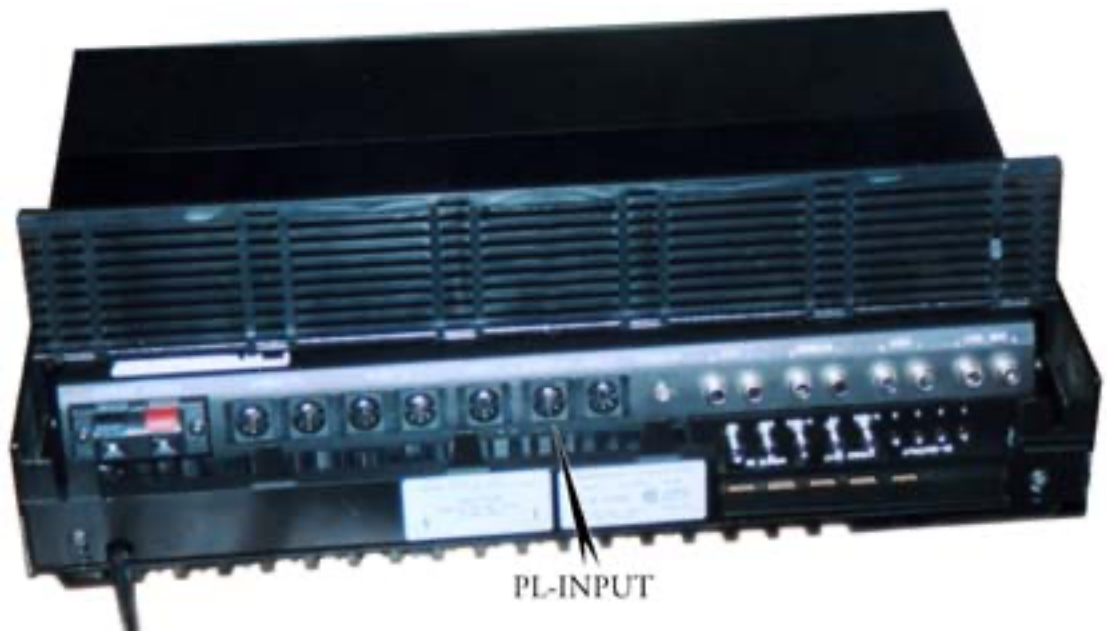
Improved 5.1 Input Upgrade for a B&O AV7000

Dolby Digital and DTS surround are fast becoming the home theater standard. An understandable loyalty to the Pro Logic only AV7000 has kept B&O owners from being able to enjoy these developments, until now. MSB Technology, in conjunction with Bang & Olufsen, is offering an upgrade for the system 7000 that provides access to Dolby Digital and DTS surround sound movies and music.

You may be aware of the 5.1 input upgrade we perform on many other models. The 5.1 upgrade for the AV7000 is unique, as no external changes are made to the unit.

How does the AV7000 5.1 Input upgrade work? - The internal modification allows any 5.1 input signal to be accepted through the **existing** PL-INPUT connector. The 7000 will **automatically** switch to the 5.1 signal any time DTS or Dolby Digital audio is sensed, so you don't have to worry about additional fussing with the remote. All original features function as they did before the upgrade.



Sources - Any Dolby Digital or DTS processor can be plugged directly into the upgraded 7000 with the adapter cables. This includes DVD players that have built in AC-3 (Dolby Digital) processors. Volume trim settings can be adjusted for optimum sound image.

How do these mysterious cables fit in? The special Y cable has a male and female DIN connector at one end, and a DB-25 connector at the other end. The male DIN connector plugs into the PL-INPUT. The cable that used to be plugged into the PL-INPUT is plugged into the female part of the new cable. This allows the PL-INPUT to have a double function: whatever it was used for originally *and* as a 5.1 input. The DB-25 end of the cable is the industry accepted 5.1 connection. Note: For sources with six RCA output connectors rather than a DB-25, MSB offers a special six RCA to DB-25 cable. You'll be using the two adaptor cables together.

Pricing - The upgrade price is $695 and includes the custom Y cable described above. The DB-25 to RCA cable is $95. The upgrade takes 5 to 10 days and comes with a one year warranty. Don't forget to send the remote when you send your unit in!

*This upgrade was evaluated by B&O in Denmark and was found to function satisfactorily.
